

David S. Li

Dear [REDACTED] Team Member,

I am writing in response to a posting that I received with regards to internships at [REDACTED]. I believe for a number of reasons that I would make a great asset on your team.

I entered Stony Brook University with no sense of direction as to what I wanted to be, before I took an introductory Java programming course. Two years later, I am programming better than I ever have. I have not only excelled in my coursework, but have also strived to help others and have assisted professors with teaching introductory computer science courses. I have also driven myself lately to learn other programming languages and tools and pursue side projects outside of class, like developing my own website and other small programs.

However, as I move closer to graduation, I yearn for real life job experience. I am looking for an opportunity that will allow me to put the technical skills that I have acquired, both in and out of class, to good use. Interning at [REDACTED] would enable me to branch out from my traditional knowledge of programming and delve into the mechanics of Git, one of the most important development tools today. Please feel free to view the attached resume displaying my qualifications, and don't hesitate to reach out if you have any questions.

I look forward to hearing from you.

Sincerely,

David S. Li
